Онтология для сетей ЭВМ

Хлопков Дмитрий Р41171

Зачем?

Множество сетевых протоколов на разных уровнях модели OSI, которые могут существовать в рамках одной сети

Для работы протоколов устройству может быть необходимо дополнительное оборудование (сетевая карта Ethernet, Wi-Fi модуль)

Протоколы разных уровней имеют свои характеристики: частота, максимальная дальность, пропускная способность, итд.

Возможность создания унифицированного формата (например для дальнейшей визуализации)

Для кого?

1 ІОТ-технологии

2 Облачные технологии

3 Архитекторы сетей

Источники данных

Организации занимающиеся стандартизацией сетевых протоколов:

W3C

IEEE

ISO

• IETF

2 Существующие базы знаний

DBpedia

Wikidata

3 Магазины комплектующих

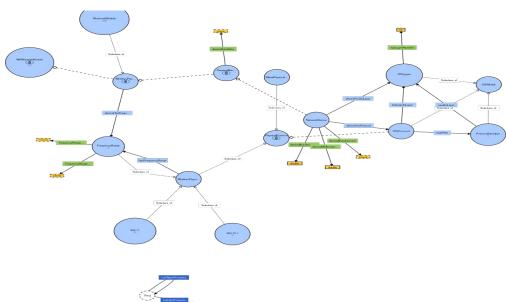

mouser.com

amperka.ru

Компетентностные вопросы

- Какие протоколы существуют на уровне OSI модели X?
- Какие устройства могут понадобиться для обеспечения протокола X?
- Какие устройства могут работать при температуре X?
- Какие устройства могут работать на частоте X?
- Какие произоводители выпускают устройства для протоколов X?

Разработанная онтология

Which protocols belongs to OSI layer #1?

```

Возникшие проблемы

- Reasoning через python сгенерировал файл, который не интерпретируется парсером
- Данные с сайта Mouser.com можно выгружать только по одной странице поиска. Так как этих страниц много, то загрузка большого числа данных занимает много времени
- Данные с сайта Mouser.com находились в формате, который необходимо было дополнительно преобразовывать. Например протокол WiFi модуля 802.11a/b/g/n нужно было преобразовывать в набор протоколов 802.11a, 802.11b итд.
- Данные о частотных диапазонах протоколов приходилось находить и заполнять вручную, так как удобный для интерпретации формат не был найден

Спасибо за внимание!
